Message from the Guest Editor

Dear colleagues,

Cytoplasmic sensors play sentinel roles in detecting intracellular pathogen- or self-derived molecular patterns and initiate a proper healing-immune response. While important for protecting us from invading pathogens and dangers, dysregulated cytoplasmic sensors can promote autoinflammatory disorders. In addition to initiating signalling cascade that results in the production of pro-inflammatory cytokines and antimicrobial peptides, some members of the cytoplasmic sensors (e.g., NLRP1b, NLRP3, NLRC4, AIM2, and PYRIN) assemble a multimeric protein complex known as inflammasomes. The last decade has seen an unprecedented development in our understanding of how these cytoplasmic sensors function within our cells to not only provide immunity but also maintain cellular homeostasis. Manuscripts (articles and reviews) relating to the recent advancement in our understanding of the cellular, molecular, and biochemical pathways that are regulated by cytoplasmic sensors will be given priority and considered for this Special Issue.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
