### Message from the Guest Editor

Dear Colleagues,

The strategies for cancer immunotherapy have obtained mixed results mainly due to immune suppression and several immune escape mechanisms induced by tumor cells. In this regard, Dendritic Cells have become a hopeful instrument for cancer vaccines that aims to re-educate the immune system, leading to a potent anti-cancer response that is able to overcome the immunosuppressive tumor microenvironment. However, cancer cells can deregulate Dendritic Cell function by a combination of different mechanisms, including antigen down-regulation and secretion of molecules that together adjust the immune-stimulating or the immune-suppressive functional plasticity of Dendritic Cells.

Therefore, new insights will be helpful to define molecules and pathways that can modulate the performance of Dendritic Cell subsets. In particular, a better comprehension of the complex interactions occurring in the tumor microenvironment will undoubtedly improve the design of really efficient and durable immunotherapeutic approaches for tumor disease control.

## Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
