Message from the Guest Editors

Epithelial–mesenchymal transition (EMT) is a biological process that allows an epithelial cell to assume a mesenchymal phenotype. It is initiated by different molecular processes, including activation of transcriptional factors, expression of specific cell-surface proteins, reorganization and expression of cytoskeletal proteins, production of ECM-degrading enzymes, and changes in microRNAs expression. There are both endogenous cell autonomous and exogenous noncell autonomous signals occurring in the process, including pathways orchestrated by TGF- β , Notch, Wnt, Hedgehog, and receptor tyrosine kinases, as well as the urokinase plasminogen activator system, the secretome of associated fibroblasts, macrophages, cancer stem cells and cancer cells, and exosomes with their cargo of microRNAs.

However, relatively little is known about how all these components are integrated and participate in the same process, and how the mesenchymal state is maintained. Deep knowledge of these aspects will help design potential therapeutic approaches that could exploit the plasticity of EMT to reverse the metastatic phenotype of many cancers. Papers related to any aspect of EMT will be considered.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
