submissions:
closed (30 June 2023)

Message from the Guest Editor

Hyaluronic acid (HA), a naturally occurring anionic polysaccharide, has attracted significant research attention in the biomedical field because it possesses well-documented biocompatibility and pharmaceutical acceptability. Due to its strong hydrophilic character and its high molecular weight in biological tissues, it presents important structural and functional roles in the body. Its high molar mass is associated with its unique viscoelastic and rheological properties and predisposes HA to play important physiological roles in living organisms, making it an attractive biomaterial for various medical applications. This Special Issue aims to highlight the current progress in the field of HA-based biomaterials, by taking a multidisciplinary approach covering the expertise of the contributing authors in polymer science, pharmaceutical technology, bioconjugate chemistry, biology and medicine.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
