Message from the Guest Editor

Dear Colleagues,

Platelets, best known as primary mediators of hemostasis and thrombosis, are a critical component of blood vessel walls. As secretory cells, platelets can release multiple substances from storage granules, biomediators and membrane vesicles, influencing both physiological and pathophysiological processes. Conversely, platelets can uptake plasma and cellular components, influencing platelet responsiveness. The analysis of platelet function through the development of powerful imaging techniques, as well as the identification of cells and new molecules that regulate their activation and aggregation within vessels, are instrumental to better understand the mechanisms through which platelets protect or damage organisms. These analyses provide useful information for studying the pathogenesis of many disease states.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
