Regulation of Plant Protein Homeostasis under Stress

Message from the Guest Editors

Plants, as sessile organisms, have acquired numerous mechanisms to cope with stress conditions. This eventually converges on the regulation of protein homeostasis, namely the complete set of molecular events which ultimately define the protein level, localization and activity of the whole proteome. Among other processes, we include protein biosynthesis, protein transport, protein modifications, protein interactions and protein targeted degradation. In this Special Issue on the 'Regulation of Plant Protein Homeostasis Under Stress', we invite authors to contribute either original research or review studies to understand the relevance of protein homeostasis to plant stress adaptation, including biotic and/or abiotic insults affecting plant growth, development and yield.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
