Molecular and Cellular Research on the Glioma and Tumor Microenvironment

Message from the Guest Editor

The most prevalent primary brain cancer in adults is glioma, which accounts for 75% of all cases. Known as grade IV glioma, GBM is the most aggressive form of this disease. As a result of the development of resistance to TMZ in GBM, and the high heterogeneity between and within tumors, the prognosis remains poor. In this scenario a central role appears to be played by the tumor microenvironment (TME). There are also different cell populations within TME, including fibroblasts, precursor cells, endothelial cells, signaling molecules, and extracellular matrix components. As a consequence, the availability of models and techniques that allow the monitoring of TME during growth or under treatment is essential for an improved understanding of tumors and for more precise diagnosis and treatment.

This Special Issue of the International Journal of Molecular Sciences welcomes both original research articles and review papers that deal with the molecular mechanisms underlying the role of microenvironment signaling in glioma.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
