Molecular Mechanism of Anti-cancer Drugs

Message from the Guest Editor

In recent decades, new classes of anti-cancer drugs, such as targeted therapy and immunotherapy, have been introduced in the clinic besides chemo- and radiotherapy, bringing great benefits to cancer patients. Despite these huge advances gained in a few years, the problem of drug resistance onset is still massively present and deserves the attention of the entire scientific community. The understanding of the molecular mechanisms of anti-cancer drugs becomes therefore crucial to identify their weaknesses and strengths so that more and more precise and effective treatments can be developed and offered to cancer patients. Thereby, in this Special Issue research articles, short communications and systematic reviews are welcomed to bring significant contributions to this topic.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
