Molecular Mechanisms on Transcription Regulation by RNA Polymerase II (Pol II)

Message from the Guest Editor

Recent studies highlight the involvement of non-membrane intracellular structures or liquid droplets, such as RNA granules, heterochromatin, and other nuclear speckles in various cellular functions. The formation of liquid droplets is driven by liquid-liquid phase separation (LLPS) through the aggregation of proteins that contain intrinsically disordered regions (IDRs). Increasing evidence has shown that LLPS plays a critical role in transcription regulation by RNA polymerase II, including the regulation of super-enhancer, transcription elongation, splicing, and other co-transcriptional processes; however, detailed mechanisms and the biological significance have not yet been elucidated. In this Special Issue, we focus on the findings of novel mechanisms of transcription regulation by RNA Polymerase II and provide an overview of the future of this field, which will add novel insights into many cellular functions. We also welcome molecular research on RNA Polymerase II (Pol II)-related fields.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
