

## Special Issue

# Advances in the Understanding of Adipose Tissue Biology and Energy Metabolism, 2nd Edition

### Message from the Guest Editor

The adipose tissues can be defined as a multi-depot endocrine organ composed of unilocular white adipocytes forming pads of white adipose tissue (WAT), which mainly functions as energy reservoirs by storing lipids, and the multilocular brown adipocytes that aggregate in specific anatomical locations to constitute discrete depots of brown adipose tissue (BAT) which uses lipids for cold-induced adaptive thermogenesis. It was also found that brite/beige adipocytes with morphofunctional features that allow them to modify the phenotype and thus function differentially based on energy metabolism requirements. The whole organ can be “whitened” when there is a surplus of energy intake or massive browning of it in case of adrenergically driven heat production with increasing energy expenditure for thermoregulation. Furthermore, both WAT and BAT secrete various hormones, cytokines, and metabolites that control systemic energy balance by modulating various neuroendocrine functions acting on the central nervous system as well as in the metabolic activity of peripheral tissues. We aim to gain insight into the molecular mechanisms involved in energy metabolism of adipocytes.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Editor-in-Chief

Prof. Dr. José L. Quiles  
Department of Physiology, Institute of Nutrition and Food Technology  
"Jose Mataix", Biomedical Research Center, University of Granada,  
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
