

# Special Issue

## Origins of Protein Translation

### Message from the Guest Editors

Protein translation as it occurs in modern cells is a complex process requiring coadapted interactions between multiple types of RNAs and proteins (RNAs: mRNA, tRNAs, rRNAs; proteins: elongation and termination factors, ribosomal proteins, tRNA synthetases), functioning under a set of rules resumed in the genetic code. This Special Issue on the origins of protein translation welcomes experiment- and theory-oriented research articles and reviews about the above, and related topics, focusing on prebiotic and early life self-organization of any components of protein translation. Keywords

- tRNA
- codon
- anticodon
- ribosome
- tRNA synthetase

## About the Journal

### Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
