

Special Issue

Trends of Translational Medicine for Oncology

Message from the Guest Editor

Translational research is crucial in informing clinical practice and trials. Bringing researchers and clinicians together and combining clinical information with basic research findings is the way to move the field forward, find the best solutions, and beat cancer. This Special Issue is actively conducting translational medicine research to further the understanding of cancer biology and to identify which patient populations may be more likely to benefit from treatments. Our goal is to develop new diagnostic procedures and more targeted treatment approaches by investigating the molecular and functional properties of different cancers. In addition, this Special Issue will evaluate potential diagnostic tools to help identify in patients biomarkers that require less invasive methods.

This Special Issue will include (but is not limited to) papers on:

- biomarkers and pharmacodiagnosics;
- imaging and technologies;
- radiation oncology;
- bioinformatics and integrated sciences;
- clinical pharmacology and pharmacometrics.
