Message from the Guest Editor

Dear Colleagues,

A blockchain is an append-only shared ledger containing recorded transactions that is implemented across a distributed business network. Blockchains, due to their key characteristic of being immutable, can be used to record many different types of business transactions. Further, when a blockchain record is coupled with a smart contract (programmed business logic) that is executed with a transaction, then the possibilities for new business opportunities that reduce costs and complexity become interesting to many different business applications, both within and beyond the financial services industry.

This Special Issue seeks high-quality contributions in theoretical, experimental and application oriented research on blockchain and smart contract technologies. We invite high-quality articles: presenting potential solutions for blockchain and smart contract challenges; and/or describing experiences in designing, implementing and using blockchain and smart contract applications to solve real world problems; and/or presenting comparisons of blockchain and smart contract solutions and technologies.

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Ei Compindex](#), [dblp](#), and [other databases](#).

Journal Rank: [CiteScore - Q2](#) (*Information Systems*)
