Message from the Guest Editors

Dear Colleagues,

Process mining has matured significantly in the past decade and is now being used extensively in academia and industry. With its beginnings in process discovery, process mining has grown to be used for performance analysis, conformance checking, variant analysis, concept drift, as well as predictive and prescriptive monitoring. However, the main objective of all kinds of process analysis is to improve business processes.

The aim of this Special Issue is to seek high-quality submissions that specifically focus on using process mining for business process improvement. The scope includes, but is not restricted to, model-driven methods (using event logs to identify patterns where improvements can be made); process mining frameworks or approaches (the development and validation of process mining methods that structure up and systematize the identification of improvement opportunities); case-based approaches; or approaches that, based on event logs, consider business process modelling, heuristics, robotic process automation, or intelligent process automation for improving business processes.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Ei Compindex](#), [dblp](#), and [other databases](#).

Journal Rank: [CiteScore - Q2](#) (*Information Systems*)
