Message from the Guest Editor

Dear Colleagues,

Multi-Criteria Decision Analysis (MCDA) techniques have been used successfully in many real-world problems. For example, in the fields of logistics, finance, environment, diagnostics, technology selection, etc. However, due to the revolution driven by Industry 4.0, with new breakthroughs in data integration, devices, knowledge techniques, innovation, management and technology, which underlines growing digitalisation and cooperative coordination between productive units in the economy, there are new concepts which do not utilize MCDA, and which would be greatly advanced by including these techniques in decision processes. A similar revolution is happening in education, which is increasingly heading towards e-learning and web-based learning, and the management of industrial assets.

All MCDA techniques are welcome, especially combined techniques, the inclusion of fuzzy sets or group decision making. The application of minority techniques, or ones that improve on those traditionally used, are also encouraged.

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Ei Compindex](#), [dblp](#), and [other databases](#).

Journal Rank: [CiteScore - Q2](#) (*Information Systems*)
