

## Special Issue

# The Future of Human Digitization

### Message from the Guest Editor

The concept of digitization refers to a large cluster of digital technologies, such as robotics, the Internet of Things, artificial intelligence and algorithms, etc. Together, they are generating a new wave of digitization. Through these technologies, ever more aspects of our physical world are being digitized. The far-reaching digitization of society raises fundamental ethical and societal issues. This challenges important public values and human rights such as privacy, equity and equality, autonomy, and human dignity. This Special Issue on the future of human digitization aims to investigate, among others, the following questions: In what way will the digitization of society be shaped by new technologies in the coming 10 to 15 years? What kind of societal and ethical issues does the digitization of society raise? To what extent do these issues challenge the current governance system? Are there any blind spots in terms of how emerging ethical and societal issues are being handled? ...

## About the Journal

### Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

*Information* is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, and other databases.

#### Journal Rank:

CiteScore - Q2 (Information Systems)
