Deadline for manuscript submissions:

closed (20 March 2024)

Message from the Guest Editor

Dear Colleagues,

The structure and properties of metal complexes have been explored with significant interest in the last century, increasing the focus on their potential biological and catalytic applications year after year. The extraordinary variety of uses that can be given to these compounds has led the scientific community to establish strong research lines in the search for new metal complexes and find novel applications for those previously characterized. In this Special Issue, we wish to cover the most recent advances in biological and catalytic applications of metal complexes by hosting a mix of original research articles and critical reviews.

Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and *Inorganics* offers authors the opportunity to publish exciting new research in an open access format.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Inorganic and Nuclear*) / CiteScore - Q2 (*Inorganic Chemistry*)
