Deadline for manuscript  
submissions:  
**closed (31 May 2019)**

### Message from the Guest Editor

Boron-based compounds have been utilized as ligands for many decades now, during which time there has been a fascinating array of compounds reported. In recent times, there have been some very exciting developments which have further reinvigorated the field. Pioneering work by outstanding leaders have led to the discovery of yet more ways in which novel boron functional groups can interact with metal centres. Alongside this, there has been a significant growth in the chemistry of metal-boryl, -borane and borohydride compounds and their interconversions via migrations of hydrogen and other groups between boron and metal centres. These have found application within element-hydrogen bond activations and ligand cooperation catalysis. The nature of the metal-boron interaction has also been of great interest. Boron-based ligands have been shown to act as X- and Z-type ligands and, in some cases, even as L-type (acting as a Lewis Base). This Special Issue aims to bring together a collection of research and review contributions highlighting recent advances in all areas involving boron based ligands. I invite you to submit your manuscript to this Special Issue.

## Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and *Inorganics* offers authors the opportunity to publish exciting new research in an open access format.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Chemistry, Inorganic and Nuclear*) / CiteScore - Q2 (*Inorganic Chemistry*)
