

Novel Ligand Design in Coordination Compounds

Guest Editor:

Dr. Pipsa Hirva

Department of Chemistry,
University of Eastern Finland,
P.O. Box 111, Joensuu, Finland

Deadline for manuscript
submissions:

closed (31 December 2019)

Message from the Guest Editor

Coordination complexes, formed from a metal cation bound to neutral or anionic organic or inorganic ligands, are known to exhibit great potential in various electronic, photophysical, magnetic, medicinal, and catalytic applications. Even though the metal plays its role, it is the ligands that enrich the functionality and properties of the coordination compounds. It has been shown in many experimental and computational studies that even with very subtle structural changes in the ligands, it is possible to drastically affect the coordination modes and therefore the properties of the complexes. Furthermore, different structural or electronic features of the ligands may alter the weak interactions between the complexes and lead to various crystalline states.

This Special Issue aims to increase our knowledge of recent progress in ligand design, and to show how this information has been exploited in producing new complexes and functional materials from coordination compounds.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and *Inorganics* offers authors the opportunity to publish exciting new research in an open access format.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Inorganic and Nuclear*) / CiteScore - Q2 (*Inorganic Chemistry*)
