Message from the Guest Editor

Dear Colleagues,

The black soldier fly (BSF), *Hermetia illucens* L., has drawn increasing attention for its promising potential of waste nutrition recycling to produce novel alternative protein, lipids, chitin resources, and other bioproducts, which is very beneficial to the sustainable development of society and economy. It is becoming one important star insect for both scientific research and industrial application. A Special Issue will be organized by the journal *Insects* to present the latest research progress on BSF. This Special Issue will cover all aspects of BSF-related research, including but not limited to the biology, microbiology, conversion technology, environmental effects, product development, and applications. We cordially invite you to submit a review or original research paper to this Special Issue.
