Message from the Guest Editor

Due to the recent proliferation in digital solutions such as social networks, recommender systems, cyberphysical social systems, and the Internet of Things, a large amount of data about an individual is collected and processed. These collected data often contain information about an individual's identity, salary, health status, social activities, etc. On one hand, this data is regarded as an oil of the economy when processed using advanced data mining and analytics tools. On the other hand, mishandling such data can spark public criticism and anger if privacy protection is not ensured. Making sense of such data while at the same time preserving privacy is another longstanding challenge in academia and research. To strike a balance between utility and privacy, much research has been proposed. Nevertheless, technical challenges and open research gaps remain in the area of privacy-preserving computing for analytics and mining purposes leverage individuals' data.

This Special Issue aims to present recent advances in tools, methods, techniques, prototypes, case studies, and technologies to improve privacy preservation leveraging traditional and AI technologies.

Message from the Editorial Board

The unique journal *Inventions* is different from all other journals. Many scholars spend their lives publishing research papers in many different journals, but most of these journals do not help scholars collate and analyze their results or assist in promoting them to a relevant industry. However, *Inventions* will help authors not only to publish their papers in the journal, but also to promote their research results to industry and assist them in realizing the purpose of technology transfer. In the future, *Inventions* will help authors to evaluate their technology license fees based on the valuation theory and approaches and also help authors to show their patents and technologies on a network transaction platform.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, Ei Compendex and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (General Engineering)
