Message from the Guest Editors

Sustainability and sustainable development represent a present topic of investigation, with particular regards to their link to pollution, carbon dioxide emission and human well-being.

Sustainable development has been introduced in natural and environmental sciences, with the aim of attracting the interest of political and business stakeholders, in order to meet the needs of the present generations without compromising the ability of future ones.

In recent decades, research on sustainability has continuously been growing in number, with a great variety of interest: they are multidisciplinary topics of investigation.

In relation to sustainability, the air, water and soil pollution represents an actual problem of industrialized societies. So, this Special Issue wishes to focus on the fundamental topics of sustainability (environment, economy and society), with particular regards to the thermodynamic analysis of the biofuels and bioplastics production, in order to respond to the previous problems of pollution.

Message from the Editorial Board

The unique journal *Inventions* is different from all other journals. Many scholars spend their lives publishing research papers in many different journals, but most of these journals do not help scholars collate and analyze their results or assist in promoting them to a relevant industry. However, *Inventions* will help authors not only to publish their papers in the journal, but also to promote their research results to industry and assist them in realizing the purpose of technology transfer. In the future, *Inventions* will help authors to evaluate their technology license fees based on the valuation theory and approaches and also help authors to show their patents and technologies on a network transaction platform.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, and other databases.

Journal Rank: CiteScore - Q1 (*General Engineering*)
