

Advances in Cellulose Nanomaterials Production and Applications

Guest Editors:

Prof. Dr. Junyong Zhu

Prof. Dr. Maria Soledad Peresin

Prof. Dr. Min Wu

Prof. Dr. Umesh Prasad Agarwal

Deadline for manuscript
submissions:
closed (30 July 2021)

Message from the Guest Editors

Cellulose nanomaterials have been attracting great attention recently in the research community for their unique morphological, mechanical, and optical properties for a variety of applications for sustainable economic development. Cellulose is renewable and found in abundance; however, only with the sustainable production of cellulose nanomaterials can the materials become truly sustainable. Existing production methods, while having achieved great success in providing materials for laboratory applications, are mostly expensive and have unintended impacts on the environment. As a result, their commercial applications remain a challenge.

Manuscripts are welcomed for submission to cover the topics of the novel and sustainable production of cellulose nanomaterials, including microscale cellulose fibrils, from a variety of natural resources; the characterization of such materials; the varied applications of such materials (including papermaking, composites, viscosity modifiers, 3D printing, biomedical and optical applications, etc.); as well as using the biorefinery approach to valorize all components of lignocellulosic materials in addition to producing lignocellulosic nanomaterials.

Message from the Editorial Board

The unique journal *Inventions* is different from all other journals. Many scholars spend their lives publishing research papers in many different journals, but most of these journals do not help scholars collate and analyze their results or assist in promoting them to a relevant industry. However, *Inventions* will help authors not only to publish their papers in the journal, but also to promote their research results to industry and assist them in realizing the purpose of technology transfer. In the future, *Inventions* will help authors to evaluate their technology license fees based on the valuation theory and approaches and also help authors to show their patents and technologies on a network transaction platform.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, Ei Compendex and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (General Engineering)
