Message from the Guest Editors

Dear Colleagues,

Coronary artery disease is the leading cause of death worldwide, and numerous research studies are conducted to improve treatment strategies and, finally, patients' outcome. During recent years, we have observed rapid progress in invasive and non-invasive diagnostics as well as in pharmacotherapy and interventional (percutaneous and surgical) techniques.

It is our pleasure to invite you to contribute to the Special Issue on "Interventional Therapies and Management in Coronary Artery Disease" which is focused on several aspects of coronary artery disease in chronic and acute coronary syndromes patients. Authors are invited to submit original research studies, state-of-the-art reviews, short contributions, and case reports. This Special Issue is mostly focused on invasive and non-invasive coronary diagnostics, pharmacotherapy, coronary revascularization with percutaneous coronary interventions and surgical techniques, epidemiology, and outcome studies.
