Message from the Guest Editor

Esophageal cancer is the sixth most common cause of cancer-related death worldwide, making it one of the most lethal gastrointestinal malignancies. Multimodal treatment plans consisting of combinations of chemotherapy, radiation, immunotherapy, and surgery are typically employed. Patients with locally advanced esophageal cancer will often undergo neoadjuvant therapy followed by surgery, which remains the gold standard of treatment. In this series we will focus on the critical aspects in the management of esophageal cancer, including systemic therapies, surgical techniques, and a review of post-operative outcomes.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
