submissions:

closed (20 December 2023)

Message from the Guest Editor

Few fields experience constant innovative development in the same way as the field of vitreoretinal interventions. The aim of this Special Issue is to consider original approaches to diagnostics, surgical management, and the post-operative assessment of the treatment results in related ocular pathologies.

Additionally, the search for parameters that are potentially useful in planning a proper surgical strategy as well as to predict prognosis will be considered carefully. In fact, several technological advances have addressed anatomical or functional issues that could be useful in supporting treatment plans and in evaluating cost-effectiveness. Topics of interest include genetics, artificial intelligence, biomarkers, current technologies extended to uncommon clinical settings, or the development of investigation tools.

Both the indication and the intraoperative and postoperative management of the various vitreoretinal pathologies require adequate know-how. We hope that the articles included in this Special Issue will assist in the choice of the most appropriate strategies in relation to the type and degree of the disease.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
