Message from the Guest Editor

Acute pancreatitis causes high morbidity, mortality rates, and hospitalization costs of over USD 30,000 per person in the US. The common causes include gallstones and alcohol use. Its incidence and hospitalization rates have increased continuously over 20 years. Approximately 80% of cases are mild, but the remaining 20% are severe and require expert consulting. Consequently, there's ongoing research on diagnostic techniques and therapies to treat complications and predictors of severity. At present, there's no consensus regarding acute pancreatitis as different approaches exist due to the poorly understood nature of pancreatic inflammation and its consequences. This issue aggregates experimental and population epidemiological studies aimed at examining disease history, advances, diagnosis and treatments, etiology and prevention, and other relationships like diabetes or chronic pancreatitis. Lastly, it explores the potential role of surgery, interventional radiology, and endoscopic ultrasound therapy to treat acute pancreatitis for better outcomes.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
