Message from the Guest Editor

Dear Colleagues,

The aging process is not programmed to be a disease, but some age-related changes occur during the lifespan at many levels. These changes carry with them an increased risk for a number of age-related diseases and degenerative conditions in humans. In the context of extension in one's lifespan, it is crucial to better understand all these factors and interactions that place people at an increased risk for pathological aging and limit the recovery after a lesion. Evidence suggests that a multidisciplinary approach to diseases is needed in order to improve quality of life. The disease response to therapeutic interventions interacts with: (i) social and behavioral factors such as environmental exposure, healthy or unhealthy behaviors, social relationships; and (ii) associated comorbidities. This Special Issue aims at presenting recent advances in the development of new interventions, starting from molecular interventions all the way environmental/social or rehabilitation strategies, including the mechanisms through which these factors exert their beneficial effects on age-related diseases.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
