Message from the Collection Editor

Dear Colleagues,

Lung cancer is a very aggressive disease. Currently, personalizing medicine has acquired a main role in the clinical practice in order to tailor the best treatment for advanced non-small lung cancer patients (NSCLC). Deeply understanding the molecular mechanisms of NSCLC is very important to the development of new drugs and biomarkers through inhibiting driver mutations responsible for disease pathogenesis. Thus, we believe that this Special Issue will be important to publish the latest updated research in NSCLC regarding future trends in prognostic and predictive biomarkers to help oncologists in the provision of the best care. All types of articles will be considered, such as narrative reviews, meta-analyses, original articles, commentaries and editorials.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
