### Message from the Guest Editors

Dear Colleagues,

Cancer therapies, such as chemotherapy, radiotherapy, and surgical procedures, are closely associated with an increased risk of cardiovascular disease (CVD) developing during the life of cancer patients. Cancer-related cardiovascular risks, in part, are considered to be present for up to 50 years after therapy. New anticancer drugs, such as immunotherapy, tyrosine kinase inhibitors, and antihormone therapies, are proven to cause endothelial dysfunction, leading to increased occurrence of CVD and related events. Furthermore, evidence that the risk factors between the occurrence of cancer and CVD overlaps are accumulating. Cardiovascular risk factors, such as unhealthy diet, tobacco smoking, obesity, diabetes mellitus, and hypertension have been reported to be related to an increased cancer risk. On the other hand, the assessment, prediction, and treatment on the risk of cardiovascular events in cancer patients receiving some cancer therapy, are improved by clinicians and researchers; however, the overall result remains insufficient. In going with times, we should continue to tackle the problems related to cardiovascular disease in cancer patients.

## Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
