### Message from the Guest Editors

In 2019, the novel severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2) caused a global pandemic, representing a major public health crisis. There is wide consensus that the COVID-19 pandemic affected not only physical health but also mental health and wellbeing. As COVID-19 was a novel disease, much understanding of its clinical course and possible long-term health consequences remains uncertain.

Given the enormous success of the First Edition of this Special Issue of *JCM*

we believe that it is time to launch the Second Edition, collecting additional insights into long COVID-19 and the post-COVID world. The Second Edition is keen to attract a global audience, welcoming contributions on this subject from researchers around the world.
