Message from the Guest Editors

Hereditary Hemorrhagic Telangiectasia (HHT) is an autosomal heritable disease, leading to vascular malformations, ranging from mucocutaneous telangiectases to large arteriovenous malformations, which can occur in different organs. HHT is associated with a decreased quality of life and severe complications. If untreated, the disease leads to a decreased life expectancy. Recent years have brought advances in diagnosis and treatment, but not a cure for HHT. The exact molecular etiology is still unknown, but important steps in unravelling the mechanisms of disease have been made.

This Special Issue aims to highlight not only the current knowledge regarding diagnosis and treatment of HHT, but also the newest insights in the molecular basis of HHT, because understanding the mechanisms of disease is essential for the development of new medicines or therapeutic strategies.

Message from the Editorial Board

Journal of Clinical Medicine (ISSN 2077-0383) is an international, peer-reviewed, open access journal dedicated to advancing clinical and preclinical research. Our Editorial Board and staff are committed to delivering cutting-edge, timely, peer-reviewed articles spanning the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and impactful research articles, as well as reviews that are clinically significant and relevant to the full spectrum of medical disciplines. All full texts are archived in PubMed Central and indexed in SCIE (Web of Science), Scopus, PubMed, and other major databases. We invite you to submit your manuscript for publication, as well as join our community as a reviewer or reader online.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
