Message from the Guest Editors

Dear Colleagues,

The prognosis of adult patients in the Emergency medicine department after traumatic brain injury is poor, as the mortality of patients with intracerebral hemorrhage (ICH) is approximately 30%–40%. In recent years, we have observed a larger diffusion of a noninvasive, repeatable, and bedside techniques for the detection of increased intracranial pressure (ICP), namely, the ultrasonography of the optic nerve sheath diameter (ONSD). This examination is particularly suitable in an intensive care or stroke-unit setting, and it could provide rapid diagnosis to start a correct management and improve patient survival. Further information could be provided by the integration with OCT of the optic nerve head.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
