closed (15 December 2018)

Message from the Guest Editor

Antithrombotic treatment is of paramount importance in patients undergoing transcatheter aortic valve replacement (TAVR) because of the increasing risk of valve thrombosis and thromboembolic events after procedure. The introduction in clinical practice of new generation devices and antithrombotic agents offer a broader spectrum of therapeutic options after PCI and TAVR procedures. This Special Issue will summarize new recommendations on optimal DAPT duration and decision-making tools in patients undergoing TAVR or PCI, based on original articles and systematic reviews.

Keywords: Antithrombotic treatment; Percutaneous coronary intervention; Aortic valve intervention; Dual antiplatelet therapy; Stent implantation; Coronary thrombosis; Bleeding; Cardiosurgery

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
