Message from the Guest Editor

Dear Colleagues,

Over the last decade, the number of products used to treat a person with haemophilia (PwH) has grown dramatically. Novel therapies offer both improved protection from bleeds and more comfort of administration. Extended half-life products allow for an increase in factor levels, even reducing the number of infusions, especially in haemophilia B. The requirement of less infusions licenses the start of regular prophylaxis even in moderate haemophilia patients. In severe haemophilia A patients, subcutaneous non-replacement therapy permits the start of prophylaxis very early in children's lives, as intravenous administration is no longer a problem. Lastly, gene therapy is now available, and PwH who undergo gene therapy may see their factor levels increase, sometimes even to normal levels.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
