Message from the Guest Editors

Dear Colleagues,

ART is used extensively as an aid in overcoming infertility problems. A remarkable percentage of people turn to assisted reproduction consultation and help from medical solutions to bring about the conception and birth of a baby of their own. Each ART cycle is complex and consists of several steps. Thus, it is crucial that this system is based on sufficient evidence and detailed guidelines. This Special Issue aims to discuss the development of assisted reproduction techniques, including their proper indication. Experimental, innovative and widely used technology supports the inter-professional team disclosure. The contradictions and their subsequent management provide the underlying background for personalised assistance in IVF and associated procedures. The success rate, benefits, risks, cost and ethics of ART are also important parts of in vitro fertilization methods and indicate the essential surveillance and vigilance in quality control. The conclusive aim of this Special Issue is to overview the most up-to-date evidence on ART to optimise guidelines and protocols in order to improve assisted reproduction technology practices and outcomes.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
