Message from the Guest Editor

Congenital heart disease is a field in which disruptive innovation and progress have globally transformed the lives of millions of people born with the condition over the last decades. However, far from being cured the majority of patients continue to be afflicted by ongoing morbidity and mortality. Congenital heart disease represents a chronic, life-long disease that affects multiple organ systems beyond the heart and the lungs. Continuing global efforts are required to improve the fate of people born with congenital heart disease. These include research focusing on clinical management, prognostication, and disease modification. As a result of the heterogeneity of the condition and fragmented care pattern, new concepts of big data analysis and machine learning will be essential in this context.

We cordially invite contributions across the spectrum of disease for this unique issue focusing on the evolving cohort of patients with congenital heart disease.

Keywords

- Congenital heart disease
- prognosis
- outcome
- clinical management
- congenital heart surgery

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
