Message from the Guest Editors

Dear Colleagues,

Periodontitis are highly prevalent oral infectious and inflammatory diseases. Periodontitis morbidity is not only oral but also systemic, leading to periodontitis being an important public health problem.

Periodontitis pathogenesis and morbidity are influenced by many modifiable and non-modifiable systemic, behavioral, and local risk factors. Therefore, periodontitis treatment should consider all these factors to be successful.

For a long time, efficient periodontitis treatment protocols have been evaluated and validated and have significantly improved periodontal conditions at population and patient level. However, in many patients, treatments are still partly or completely unsuccessful, and these failures remain not fully understood in most cases, and their efficient management difficult to perform.

This Special Issue covers a large research field in periodontology, but papers related to initial periodontal treatment failures, their definition, causes, consequences, prevention, and treatments are of particular interest.

Special Issue

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine*'s (*JCM*) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.
Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
