### Message from the Guest Editors

Pharmacoepidemiology refers to the study under real conditions and in large populations of the use, efficacy, and risks of drugs. With the constant approval of new drugs, there is a need to know their beneficial effects and the magnitude of risks in routine clinical practice. First, we must confirm and explore how efficacy demonstrated in clinical trials translates to the real world. Second, pharmacovigilance actions need safety studies when drugs are used in a larger number of patients, and in patients who have multiple comorbidities and are polymedicated. With the aim of improving therapeutic decision making and patient health outcomes, the use of real-world data is increasing, as is the use of electronic health databases at the primary care and hospital level. As a consequence, new pharmacoepidemiological and statistical methods are being developed and should be disseminated to the scientific community.

With this Special Issue, we offer researchers the opportunity to showcase the scope of pharmacoepidemiology to a wide audience and the relevance of this discipline in usual clinical practice.

## Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPUS / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
