Message from the Guest Editors

Sarcoidosis is a rare systemic granulomatous disease of unknown cause(s) that initiates in genetically predisposed individuals a disproportionate inflammatory response leading to granuloma formation. For most patients, spontaneous resolution or short courses of glucocorticoids will take place; however, absence of response to existing lines of treatment will lead to a reduced quality of life with dyspnea, fatigue, and severe disabilities associated with pulmonary, cardiac, and nervous system impairment. Both the innate and adaptive immune systems are involved in sarcoidosis pathogenesis. Factors influencing the disease course towards clinical resolution versus chronic disease and fibrosis remain unknown and represent major targets for the development of new treatment strategies to replace/enhance current therapies, including steroids and/or biologic agents. Identification of new mechanisms in the pathogenesis of sarcoidosis should help us to better understand the variability in disease course amongst patients and to develop more effective treatments for sarcoidosis.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPUS / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
