Clinical Diagnosis and Management of Acute Coronary Syndrome

Message from the Guest Editors

Acute coronary syndrome (ACS) remains one of the most important causes of morbidity and mortality in modern clinical practice. The diagnosis and management of ACS continue to evolve significantly in contemporary clinical practice. The aim of this Special Issue is to provide original research and state-of-the-art review papers regarding important current trends in the diagnosis and management of ACS. While the editors welcome all submissions related to ACS, they will consider several subjects with particular interest including 1) research regarding rapid diagnosis algorithms using point-of-care biomarker tests, 2) treatment and identification of vulnerable plaques, and 3) antiplatelet strategies. We encourage researchers in the field of general and interventional cardiology to submit their manuscripts for this Special Issue.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
