## Breast Cancer: Clinical Diagnosis and Personalized Therapy

### Message from the Guest Editor

Dear Collegues, Breast cancer treatment has significantly changed and expanded in the last few decades, mainly due to the increased understanding of the molecular factors contributing to breast cancer pathogenesis and heterogeneity. Although overall survival has improved due to advanced diagnostic modalities as well as the introduction of tailored treatements directed at specific patient populations, there is still room for improvement. This Special Issue addresses the topic of precision medicine and novel research in the field of diagnosis, predictive biomarkers, loco-regional treatment (radiation and surgery), and systemic treatments.
