Multiparametric Ultrasound Techniques for Liver Disease Assessments

Message from the Guest Editor

Ultrasound is a non-invasive, safe, and effective method for evaluating common liver and bile duct conditions, including fibrosis, steatosis, and focal lesions.

Multiparametric ultrasound (M-US) techniques include conventional sonography, contrast-enhanced sonography, elastography, and endoscopic ultrasound, which serve as essential tools for clinicians. This Special Issue aims to provide a comprehensive understanding of the diagnostic potential of M-US in liver diseases and conditions where the liver is a key focus. Clinicians must be aware of the capabilities and limitations of multiparametric liver ultrasound to effectively integrate these techniques into their practice. We encourage authors to introduce clinical topics by discussing the use, advantages, and limitations of ultrasound, grounded in the latest evidence-based medicine. Each article should provide an up-to-date review, offering readers a holistic perspective on its clinical applications. We invite all interested contributors to participate and share their unique perspectives, acknowledging that ultrasound utilization in liver diseases transcends hepatology and impacts the daily work of many healthcare providers.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
