New Insights into Arterial Stiffness

Message from the Guest Editor

Arterial stiffness is a concept that has been developed in the field of epidemiological studies. It is well known that people with increased arterial stiffness have a higher incidence of future cardiovascular disease. The cardio-ankle vascular index (CAVI) was developed as an index of arterial stiffness from the origin of the aorta to the ankle. CAVI is a numerical index of arterial stiffness derived from the stiffness parameter beta theory and the application of the Bramwell–Hill equation for pulse wave velocity (PWV). The main advantage of CAVI is its independency from blood pressure at the time of measurement. By taking advantage of this feature, CAVI makes it possible to study vascular function, which has been difficult with the previously utilized PWV. CAVI, measured at stability, reflects arterial structural stiffness well. On the other hand, CAVI that fluctuates briefly with intervention or invasion is recognized as representing functional arterial stiffness. Changes in arterial stiffness due to various therapeutic interventions and risk exposures is a new expanding research field.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andrès

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi

Department of Acute Care Medicine, University of Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1
(General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2024).
