Anesthesia and Analgesia for High-Risk Pulmonary Patients

Message from the Guest Editor

Recent advances in regional anesthesia have widened the usability of peripheral nerve blocks, even to certain high-risk patients that were once precluded due to the frailty of their respiratory condition. Compromised pulmonary patients would be subjected to general anesthesia and higher opioid usage, leading to an increased risk of postoperative pulmonary complications. Due to the innovations of ultrasonography, regional blocks have recently been refined to target select nerves supplying the shoulder that do not lead to adverse events, such as the suprascapular and axillary nerves. These novel phrenic-sparing blocks may be effective alternatives to the interscalene block and provide anesthesia and analgesia to these high-risk patients. This Special Issue will identify the gaps in the novel regional techniques that are diaphragm sparing based on original research and review papers. **Topics will include:**

- The use of novel regional techniques that are diaphragm sparing
- Comparison between novel techniques to the interscalene block
- Postoperative complications of patients with pulmonary disease
- Regional versus general anesthesia in patients with pulmonary disease

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andrès

Internal Medicine Department, University Hospital Strasbourg, 67081
Strasbourg, France

Prof. Dr. Kent Doi

Department of Emergency and Critical Care Medicine, The University of
Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
