

Special Issue

Targeted Treatment of Kidney Stones

Message from the Guest Editors

The primary objective of this Special Issue is to provide clinicians and researchers with a comprehensive understanding of the targeted treatment modalities available for kidney stones. We aim to highlight the recent developments in minimally invasive techniques, such as shockwave lithotripsy, ureteroscopy, percutaneous nephrolithotomy and laser lithotripsy. Additionally, we seek to address the challenges associated with stone composition analysis, patient selection and post-treatment follow-up. We encourage submissions that cover a wide range of topics, including, but not limited to, the following:

- Advances in surgical interventions for complex stone cases;
- Pharmacological approaches for preventing stone recurrence;
- Evaluation and comparison of different imaging modalities for stone detection and characterization;
- Patient selection criteria and personalized treatment strategies.

By showcasing the latest advancements in targeted treatment, we hope to improve patient outcomes, reduce complications and enhance the overall quality of care.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
