Neuromuscular Ultrasound: Current Challenges, Advances, and Future Applications

Message from the Guest Editor

Diagnostic ultrasound represents an irreplaceable tool in physicians' hands able to provide mainly (but not exclusively) morphological information about the tissues. In neuromuscular disorders, since the first applications, the ability of ultrasound to depict the characteristics of nerves and muscles has been continuously shown. The importance of ultrasound is not only limited to the diagnostic field. In fact, it directly delivers data fundamental for the surgical plan, when required. Furthermore, ultrasound is essential for specific interventions; for example, the use of ultrasound in drug administration allows avoiding side effects due to blind injections. Even rehabilitation can be assisted by ultrasound, obtaining specific outcomes about nerves and structure, like the dimension and the echogenicity. Nevertheless, ultrasound recently showed its potential capability to assess the organs from different points of view. In particular, the application of postprocessing image analysis and the use of elastography has opened new doors for the use of ultrasound in medicine. New developments are ongoing and new facets of this fascinating technique probably wait to be explored.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andrès

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi

Department of Acute Care Medicine, University of Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1
(General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.3 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2024).
