

Special Issue

Theoretical and Computational Investigation on Composite Materials

Message from the Guest Editor

This Special Issue aims to bring together experts and researchers in theoretical and computational modeling of composite materials, covering topics such as the effects of the reinforcement stacking sequence, ply orientation, agglomeration and dispersion of nanoparticles, surface treatment and the functionalization of reinforcements, interfacial interactions between matrix and reinforcement, delamination/debonding and failure, the volume fractions of constituents, the porosity level of composites, etc. Topics include but are not limited to: Classical and high-performance advanced theories and multiscale approaches (including but not limited to quantum mechanics or ab initio modeling, molecular dynamics, meso-mechanics modeling, and finite element analysis). Composite materials to be studied include but are not limited to continuous/discontinuous fiber-reinforced composites and laminates, nanoparticle or nanofiber modified composites, functionalized composites, carbon nanotubes (CNTs), graphene nanoplatelets, and innovative and advanced classes of composites.

Guest Editor

Prof. Dr. Zhong Hu

Department of Mechanical Engineering, South Dakota State University, Brookings, SD, USA

Deadline for manuscript submissions

15 February 2026

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Dr. Francesco Tornabene
Department of Innovation Engineering, University of Salento, 73100
Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Materials Science, Composites) / CiteScore - Q1 (Engineering (miscellaneous))
