

Special Issue

Muscular Dystrophy

Message from the Guest Editor

Muscular dystrophies (MDs) include several inherited diseases caused by mutations in distinct genes resulting in muscle degeneration, accumulation of fibrotic and fatty tissues, and loss of muscle force, the combination of which leads to impaired motor activity and, in some cases, premature death. Although different MDs share common histopathological hallmarks, different molecular mechanisms underline their etiology and pathological outcome. The most common MD is Duchenne muscular dystrophy (DMD), an X-linked recessive disease usually resulting in the complete absence of dystrophin, with consequent destabilization of the structural and functional integrity of myofibers during contraction. This Special Issue will focus on the diverse aspects of “Muscular Dystrophy” at the molecular, cellular and whole organism level, including animal experimental models and human patients, and the therapeutic approaches proposed so far. Your contribution with original papers or review articles is particularly welcome.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Giuseppe Musumeci
Department of Biomedical and Biotechnological Sciences, Anatomy,
Histology and Movement Sciences Section, School of Medicine,
University of Catania, 95123 Catania, Italy

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, PubMed,
PMC, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Sport Sciences) / CiteScore - Q2 (Physical
Therapy, Sports Therapy and Rehabilitation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.9 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the first half of 2024).
