Message from the Guest Editors

The field of research into cognitive abilities is increasingly interested in examining the role of non-cognitive, interindividual difference variables (e.g., broad and narrow personality traits) to understand the antecedents of intelligence. In this Special Issue, we aim to extend the understanding of the associations and the potential interplay between cognitive abilities and non-cognitive individual difference variables.

We welcome submissions that examine basic research questions (e.g., associations between intelligence and non-cognitive constructs) and applied research questions (e.g., testing and comparing the predictive power of cognitive and non-variables on external indicators such as school grades or indicators of health). Additionally, we particularly invite submissions that extend the unit of analysis from individuals to dyads or groups. This might include research into the interpersonal perception of intelligence (e.g., accuracy and biases) and/or the role of cognitive abilities in social relationships (e.g., in couples or among workers). In line with the journal scope, we also welcome review articles, theoretical contributions, meta-analyses, and commentaries

Message from the Editor-in-Chief

The relatively new and ambitious *Journal of Intelligence* is devoted to the study of human intelligence. Intelligence is a fundamental core of being human, with far-ranging implications for all members of our society. Now more than ever, in a world in which most have access to the Internet, information, and misinformation, with reduced face-to-face interactions, understanding how to measure and develop human intelligence is a critical and vital mission. Human intelligence is studied from many different perspectives, for different purposes, and this journal has an open policy with respect to approaches and methodologies. We encourage submissions with the potential to innovate, show alternative perspectives, and highlight the importance of developing and measuring intelligence as well as studies on intelligence that have an impact on our lives.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SSCI (Web of Science), PubMed, PMC, PsycInfo, PSYINDEX, and other databases.

Journal Rank: JCR - Q1 (Psychology, Multidisciplinary) / CiteScore - Q2 (*Education*)
